

THE CITY OF
SAN DIEGO

Rowena Street Storm Drain Improvement Phase II Project

Project Background

The existing Rowena Street storm drain is nearing the end of its service life. This repair effort will improve reliability, bring the storm drain system in this area up to modern standards, will help accommodate community growth, and will also reduce maintenance requirements.

Project Overview

The project will line the existing Rowena Street storm drain pipe with HDPE (high density polyethylene) and grout which will greatly improve the strength and reliability of the pipe. The curb drain inlet on the west side of Rowena Street will be removed and replaced to meet current City standards. Work will be done from both ends of the storm drain from Tuxedo Park to Rowena Street.

There should be minimal to no impact to residents. While construction activity is being performed on Tuxedo Street, a small portion of the street may be closed or traffic control may be necessary, but access to all residences will be possible by using an alternate route.

Construction Schedule

Construction Start: August 2010
Construction Finish: January 2011

Cost

The construction estimate is for \$320,900.

- Airports
- Bikeways
- Bridges
- Drainage Control & Flood Control Facilities
- Libraries
- Park & Recreation Centers
- Police, Fire & Lifeguard Stations
- Street Improvements
- Street Lights & Traffic Signals
- Utilities Undergrounding
- Water & Sewer Facilities
- Water & Sewer Pipelines
